

WHY CHOOSE...

Cloud-Based Performance Management Software

EASE OF USE

Employees can access applications on the move via the web and the managers can respond virtually; this really echoes how people want to work nowadays.

SECURITY

Most UK providers of cloud-based HR software use specialist hosting providers in the UK who have security and back up procedures that are far more secure than any internally hosted software.

REAL-TIME DATA

The ability to access your HR data in real-time means you can add far greater value as a HR professional. This allows you to be more proactive within your organisation. This can be life changing!

COSTS INVOLVED

Infrastructure can be expensive. Instead you simply rent the cloud application from the provider. You also don't have the maintenance costs associated with legacy technology.

SUPPORT OFFERED

There is no additional pressure on your IT department because the software is independent and support is provided directly from the HR Software provider.

SPEED OF SET UP

As it is hosted technology that is accessed independently via the web, it can be set up and configured quickly and simply, without the need for lengthy integration.
